Photobiological Safety of Lamps and Lamp Systems Testing Report

Reported by(Printed name and signature)..... :	Peng-Tai Huang (Engineer) 
Reviewed by(Printed name and signature) :	Chang-Lung Chen (Project Engineer) 
Testing Laboratory	
Name	Jing Hong Examine Technology Co., Ltd.
Address	No.170, Jiancuolun, Erlun Township, Yunlin County 649, Taiwan (R.O.C.)
Applicant	
Name	GlacialTech Inc.
Address	9F1., No. 352, Sec. 2, Jung Shan Rd., Jung He City, Taipei 235, Taiwan
Test specification	
Standard	EN 62471(2008)
Sample information	
Product	LED Flood Light
Trademark	 or 
Model and/or type reference..... :	GL-FL100-CW
Series model..... :	N/A
Rating(s)..... :	AC 100~240V/50/60Hz
Tested Voltage/Frequency	AC 240V/50Hz
Load Type..... :	LED module 100W × 1PCS
Ballast Type..... :	Glacial Power/GP-LS100P-36 1E
Dimensions..... :	283 mm (L) × 160 mm (W) × 248 mm (H)
Particulars :	
Tested lamp	<input checked="" type="checkbox"/> continuous wave lamps <input type="checkbox"/> pulsed lamps
Lamp cap	N/A
Type of lamp	LED
Measurement distance..... :	4540 mm
Illuminance..... :	500.00 lx
Luminance..... :	23053.66 cd/m ²
Angular subtense..... :	34.87 mrad
Used measurement instrument	spectrophotometric methods
Temperature by measurement	25.2 °C
Electrical parameter :	
Tested Voltage/Frequency	AC 240V/50Hz
Current..... :	0.404 A
Wattage..... :	94.7 W
Power Factor..... :	0.976

**Description**

Testing Ballast Type..... : Glacial Power/GP-LS100P-36 1E
CCT / Ra : 5348K / 81.6

Possible test case verdicts

Test case does not apply to the test object..... : N(N/A)
Test object does meet the requirement..... : P(Pass)
Test object does not meet the requirement..... : F(Fail)

Testing

Date of receipt of test item..... : Mar. 02, 2015
Result:..... : Exempt

General remarks

The inspection report totally has 15 pages, and it will be invalid when the pages are separated.
The inspection report shall not be extracted without the consent of use.
The inspection report may not be used for advertising, publications or merchandising purposes.
The inspection report will be invalid without the "the seal on the perforation".
The inspection report is only responsible for the test samples.

EN 62471

Clause	Standard remark	Result remark	Verdict
4	Exposure Limits		--
4.1	General		P
	The exposure limits in this standard is not less than 0,01 ms and not more than any 8-hour period and should be used as guides in the control of exposure		P
	Detailed spectral data of a light source are generally required only if the luminance of the source exceeds $10^4 \text{ cd} \cdot \text{m}^{-2}$	23053.66 cd/m^2	P
4.3	Hazard exposure limits		P
4.3.1	Actinic UV hazard exposure limit for the skin and eye		P
	The exposure limit for effective radiant exposure is 30 $\text{J} \cdot \text{m}^{-2}$ within any 8-hour period		P
	To protect against injury of the eye or skin from ultraviolet radiation exposure produced by a broadband source, the effective integrated spectral irradiance , ES, of the light source shall not exceed the levels defined by: $E_s \cdot t = \sum_{200}^{400} \sum_t E_\lambda(\lambda, t) \cdot S_{UV}(\lambda) \cdot \Delta t \cdot \Delta \lambda \leq 30 \quad \text{J} \cdot \text{m}^{-2}$		P
	The permissible time for exposure to ultraviolet radiation incident upon the unprotected eye or skin shall be computed by: $t_{max} = \frac{30}{E_s} \quad \text{s}$		P
4.3.2	Near-UV hazard exposure limit for eye		P
	For the spectral region 315 nm to 400 nm (UV-A) the total radiant exposure to the eye shall not exceed 10000 $\text{J} \cdot \text{m}^{-2}$ for exposure times less than 1000 s. For exposure times greater than 1000 s (approximately 16 minutes) the UV-A irradiance for the unprotected eye, EUVA, shall not exceed 10 $\text{W} \cdot \text{m}^{-2}$.		P
	The permissible time for exposure to ultraviolet radiation incident upon the unprotected eye for time less than 1000 s, shall be computed by: $t_{max} \leq \frac{10\,000}{E_{UVA}} \quad \text{s}$		P
4.3.3	Retinal blue light hazard exposure limit		P
	To protect against retinal photochemical injury from chronic blue-light exposure, the integrated spectral radiance of the light source weighted against the blue-light hazard function, B(λ), i.e., the blue-light weighted radiance , LB, shall not exceed the levels defined by: $L_B \cdot t = \sum_{300}^{700} \sum_t L_\lambda(\lambda, t) \cdot B(\lambda) \cdot \Delta t \cdot \Delta \lambda \leq 10^6 \quad \text{J} \cdot \text{m}^{-2} \cdot \text{sr}^{-1}$		P
	$L_B = \sum_{300}^{700} L_\lambda \cdot B(\lambda) \cdot \Delta \lambda \leq 100 \quad \text{W} \cdot \text{m}^{-2} \cdot \text{sr}^{-1}$		P
4.3.4	Retinal blue light hazard exposure limit - small source		P

EN 62471

Clause	Standard remark	Result remark	Verdict
	Thus the spectral irradiance at the eye E_λ , weighted against the blue-light hazard function $B(\lambda)$ shall not exceed the levels defined by: $E_B \cdot t = \sum_{300}^{700} E_\lambda(\lambda, t) \cdot B(\lambda) \cdot \Delta\lambda \leq 100 \quad J \cdot m^{-2}$		P
	$E_B = \sum_{300}^{700} E_\lambda \cdot B(\lambda) \cdot \Delta\lambda \leq 1 \quad W \cdot m^{-2}$		P
4.3.5	Retinal thermal hazard exposure limit		P
	To protect against retinal thermal injury, the integrated spectral radiance of the light source, L_λ , weighted by the burn hazard weighting function $R(\lambda)$ (from Figure 4.2 and Table 4.2), i.e., the burn hazard weighted radiance, shall not exceed the levels defined by: $L_R = \sum_{380}^{1400} L_\lambda \cdot R(\lambda) \cdot \Delta\lambda \leq \frac{50\,000}{\alpha \cdot t^{0,25}} \quad W \cdot m^{-2} \cdot sr^{-1}$		P
4.3.6	Retinal thermal hazard exposure limit – weak visual stimulus		P
	For an infrared heat lamp or any near-infrared source where a weak visual stimulus is inadequate to activate the aversion response, the near infrared (780 nm to 1400 nm) radiance, LIR, as viewed by the eye for exposure times greater than 10 s shall be limited to $L_{IR} = \sum_{780}^{1400} L_\lambda \cdot R(\lambda) \cdot \Delta\lambda \leq \frac{6\,000}{\alpha} \quad W \cdot m^{-2} \cdot sr^{-1}$		P
4.3.7	Infrared radiation hazard exposure limits for the eye		P
	The avoid thermal injury of the cornea and possible delayed effects upon the lens of the eye (cataractogenesis), ocular exposure to infrared radiation, EIR, over the wavelength range 780 nm to 3000 nm, for times less than 1000 s, shall not exceed: $E_{IR} = \sum_{780}^{3000} E_\lambda \cdot \Delta\lambda \leq 18\,000 \cdot t^{-0,75} \quad W \cdot m^{-2}$		P
	For times greater than 1000 s the limit becomes: $E_{IR} = \sum_{780}^{3000} E_\lambda \cdot \Delta\lambda \leq 100 \quad W \cdot m^{-2}$		P
4.3.8	Thermal hazard exposure limit for the skin		P
	Visible and infrared radiant exposure (380 nm to 3000 nm) of the skin shall be limited to: $E_H \cdot t = \sum_{380}^{3000} \sum_i E_\lambda(\lambda, t) \cdot \Delta\lambda \cdot \Delta\lambda \leq 20\,000 \cdot t^{0,25} \quad J \cdot m^{-2}$		P
5	Measurement of lamps and lamp systems		--
5.1	Measurement conditions		P

EN 62471

Clause	Standard remark	Result remark	Verdict
	Measurement conditions shall be reported as part of the evaluation against the exposure limits and the assignment of risk classification.		P
5.1.1	Lamp ageing (seasoning)		N
	Seasoning of lamps shall be done as stated in the appropriate IEC lamp standard.		N
5.1.2	Test environment		P
	For specific test conditions, see the appropriate IEC lamp standard or in absence of such standards, the appropriate national standards or manufacturer's recommendations.		P
5.1.3	Extraneous radiation		P
	Careful checks should be made to ensure that extraneous sources of radiation and reflections do not add significantly to the measurement results.	Measured in the darkroom	P
5.1.4	Lamp operation		P
	Operation of the test lamp shall be provided in accordance with:		P
	the appropriate IEC lamp standard, or		N
	the manufacturer's recommendation		P
5.1.5	Lamp system operation		P
	The power source for operation of the test lamp shall be provided in accordance with:		P
	the appropriate IEC standard, or		N
	the manufacturer's recommendation		P
5.2	Measurement procedure		P
5.2.1	Irradiance measurements		P
	Minimum aperture diameter 7mm.	Aperture diameter 7mm	P
	Maximum aperture diameter 50 mm.	Aperture diameter 7mm	N
	The measurement shall be made in that position of the beam giving the maximum reading.		P
	The measurement instrument is adequately calibrated.		P
5.2.2	Radiance measurements		P
5.2.2.1	Standard method		P
	The measurements made with an optical system.	In the measurement optical system	P
	The instrument shall be calibrated to read in absolute radiant power per unit receiving area and per unit solid angle to acceptance averaged over the field of view of the instrument.		P
5.2.2.2	Alternative method		N
	Alternatively to an imaging radiance set-up, an irradiance measurement set-up with a circular field stop placed at the source can be used to perform radiance measurements.		N
5.2.3	Measurement of source size		P
	The determination of α , the angle subtended by a source, requires the determination of the 50% emission points of the source.		P
5.2.4	Pulse width measurement for pulsed sources	Continuous wave lamps	N

EN 62471

Clause	Standard remark	Result remark	Verdict
	The determination of Δt , the nominal pulse duration of a source, requires the determination of the time during which the emission is > 50% of its peak value.		N
5.3	Analysis methods		P
5.3.1	Weighting curve interpolations		P
	To standardize interpolated values, use linear interpolation on the log of given values to obtain intermediate points at the wavelength intervals desired.		P
5.3.2	Calculations		P
	The calculation of source hazard values shall be performed by weighting the spectral scan by the appropriate function and calculating the total weighted energy.		P
5.3.3	Measurement uncertainty		P
	The quality of all measurement results must be quantified by an analysis of the uncertainty.		P
6	Lamp Classification		--
	For the purposes of this standard it was decided that the values shall be reported as follows:		P
	for lamps intended for general lighting service, the hazard values shall be reported as either irradiance or radiance values at a distance which produces an illuminance of 500 lux, but not at a distance less than 200 mm	4540 mm	P
	for all other light sources, including pulsed lamp sources, the hazard values shall be reported at a distance of 200 mm	General lighting Lamps	N
6.1	Continuous wave lamps		P
6.1.1	exempt Group		P
	In the exempt group are lamps, which does not pose any photobiological hazard. The requirement is met by any lamp that does not pose:	Details shown in Table 6.1	P
	an actinic ultraviolet hazard (E_S) within 8-hours exposure (30000 s), nor		P
	a near-UV hazard (E_{UVA}) within 1000 s, (about 16 min), nor		P
	a retinal blue-light hazard (L_B) within 10000 s (about 2,8 h), nor		P
	a retinal thermal hazard (L_R) within 10 s, nor		P
	an infrared radiation hazard for the eye (E_{IR}) within 1000 s		P
6.1.2	Risk Group 1 (Low-Risk)	exempt Group	N
	In this group are lamps, which exceeds the limits for the exempt group but that does not pose:		N
	an actinic ultraviolet hazard (E_S) within 10000 s, nor		N
	a near ultraviolet hazard (E_{UVA}) within 300 s, nor		N
	a retinal blue-light hazard (L_B) within 100 s, nor		N
	a retinal thermal hazard (L_R) within 10 s, nor		N
	an infrared radiation hazard for the eye (E_{IR}) within 100 s		N

EN 62471

Clause	Standard remark	Result remark	Verdict
	Lamps that emit infrared radiation without a strong visual stimulus and do not pose a near-infrared retinal hazard (L_{IR}), within 100 s are in Risk Group 1.		N
6.1.3	Risk Group 2 (Moderate-Risk)	exempt Group	N
	This requirement is met by any lamp that exceeds the limits for Risk Group 1, but that does not pose:		N
	an actinic ultraviolet hazard (E_S) within 1000 s exposure, nor		N
	a near ultraviolet hazard (E_{UVA}) within 100 s, nor		N
	a retinal blue-light hazard (L_B) within 0,25 s (aversion response), nor		N
	a retinal thermal hazard (L_R) within 0,25 s (aversion response), nor		N
	an infrared radiation hazard for the eye (E_{IR}) within 10 s		N
	Lamps that emit infrared radiation without a strong visual stimulus and do not pose a near-infrared retinal hazard (L_{IR}), within 10 s are in Risk Group 2		N
6.1.4	Risk Group 3 (High-Risk)	exempt Group	N
	Lamps which exceed the limits for Risk Group 2 are in Group 3.		N
6.2	Pulsed lamps	Continuous wave lamps	N
	Pulse lamp criteria shall apply to a single pulse and to any group of pulses within 0,25 s.		N
	A pulsed lamp shall be evaluated at the highest nominal energy loading as specified by the manufacturer.		N
	The risk group determination of the lamp being tested shall be made as follows:		N
	a lamp that exceeds the exposure limit shall be classified as belonging to Risk Group 3 (High-Risk)		N
	for repetitively pulsed lamps, a lamp whose weighted radiant exposure or weighted radiance dose is below the EL, shall be evaluated using the continuous wave risk criteria discussed in clause 6.1, using time averaged values of the pulsed emission		N
